ACTA PALAEONTOLOGICA POLONICA

First report on the occurrence of *Neseuretinus* and *Ovalocephalus* trilobites in the Middle Ordovician of Iran

Mansoureh Ghobadi Pour and Leonid E. Popov
Acta Palaeontologica Polonica 54 (1), 2009: 125-133 doi:http://dx.doi.org/10.4202/app.2009.0113

In the Derenjal Mountains of east Central Iran, the upper part of the Shirgesht Formation (uppermost Darriwilian) contains a distinct trilobite assemblage that includes *Neseuretinus birmanicus* and *Ovalocephalus* aff. *obsoletus* among others. Both genera were previously unknown in Iran. The occurrence of *Ovalocephalus* represents the earliest sign of westward taxon migration from China towards higher latitudes along the West Gondwanan margin, which may be related to global warming, after a short episode of cooler climate in the early to mid Darriwilian. Patterns of biogeographical distribution of *Ovalocephalus* and *Neseuretinus* suggest that Central Iran was part of an "overlap zone" where tropical and high latitude benthic taxa mingled.

Key words: Trilobites, palaeobiogeography, taxonomy, Ordovician, Darriwilian, Iran
