

On *Peregrinella multicarinata* (Lamarck) (Brachiopoda)

Gertruda Biernat

Acta Palaeontologica Polonica 02 (1), 1957: 19-50

Numerous specimens of *Peregrinella multicarinata* (Lamarck) have been studied on Polish and French material, with consideration to the ontogeny and individual variability of this form. The Polish material was collected from the vicinity of Wieliczka and abounds in young individuals, that from France was lent to the author from the collection of the Palaeontological Museum of the Humboldt University in Berlin.
