

Dactylodiscus beskidensis n.gen., n.sp. - a medusa from the Carpathian flysch

Andrzej Ślaczka

Acta Palaeontologica Polonica 16 (4), 1971: 451-459

Impressions of organisms with radially arranged lobes are recorded in the Lower Istebna Beds on Lake Rożnów in Polish Central Carpathians. They are most similar to those of the medusae. The new genus and species incertae sedis *Dactylodiscus beskidensis* n.sp. has been erected for them.
