Acta Palaeontologica Polonica 56 (3), 2011: 535-552 doi: <http://dx.doi.org/10.4202/app.2010.0003>

A new medium-sized rebbachisaurid sauropod from the Castrillo la Reina Formation (Upper Barremian–Lower Aptian) in Burgos Province, *Demandasaurus darwini* gen. et sp. nov., is described. It is known from an incomplete but associated skeleton that includes cranial and post-cranial remains. *Demandasaurus darwini* gen. et sp. nov. presents 9 autapomorphies in the teeth and vertebrae. *Demandasaurus* is the first diplodocoid sauropod described from the Cretaceous of the Iberian Peninsula. Its inclusion in the Rebbachisauridae is well supported by our phylogenetic hypothesis, which situates it as a sister group of *Nigersaurus* from the Aptian of Niger, with which it shares various synapomorphies. The discovery of *Demandasaurus* provides further evidence of the sporadic use of the Apulian Route by dinosaurs during the Early Cretaceous for moving between the south of Europe (Laurasia) and the north of Africa (Gondwana).

Key words: Sauropoda, Rebbachisauridae, systematic, palaeobiogeography, Early Cretaceous, Spain.
