ACTA PALAEONTOLOGICA POLONICA

On a new species of emydid-tortoise from the Pliocene of Poland

Marian Młynarski
Acta Palaeontologica Polonica 01 (2), 1956: 153-164

An additional discovery has recently been made in the Węże bone breccia of more perfect remains of a Pliocene tortoise, previously identified by the writer with *Emys orbicularis* L. This find justifies the erection of a new species for which the name of *Emys wermuthi* n. sp. is suggested.
