ACTA PALAEONTOLOGICA POLONICA

Serpulidae from the Dano-Montian bore-hole at Boryszew, Poland

Halina Pugaczewska
Acta Palaeontologica Polonica 12 (2), 1967: 189-0

Three species of Serpulidae (including a new one), belonging to three different genera which represent the subfamilies: Filograninae Rioja, Serpulinae Rioja and Ditrupinae Regenhardt, are described in the present paper. The material comes from the heap of the Boryszew (near Sochaczew) bore-hole, from depths of 193-207 m, where deposits are assigned to the boundary between Danian and Montian.
