ACTA PALAEONTOLOGICA POLONICA

Deers from Węże and their relationship with the Pliocene and Recent Eurasiatic Cervidae

Teresa Czyżewska
Acta Palaeontologica Polonica 13 (4), 1968: 537-593

Three species of deers, Procapreolus wenzensis (Czyzewska, 1960). *Cervus warthae* n. sp. and *Muntiacus polonicus* n. sp. are described from the Pliocene locality Węże near Działoszyn. A new systematics of the subfamily Cervinae is here suggested and its evolution presented. The results of a quantitative analysis of deer remains from the bone breccia of that locality and the palaeontological conclusions drawn from them are also discussed.
