ACTA PALAEONTOLOGICA POLONICA

On the Frasnian brachiopod genus *Fitzroyella* Veevers from Poland

Gertruda Biernat
Acta Palaeontologica Polonica 14 (3), 1969: 373-389

Fitzroyella alata n.sp. from the Frasnian of the Holy Cross Mountains (Góry Świętokrzyskie) is described. A cardinal process, previously unknown for the genus, has been observed in the new species and considered as characteristic of the genus *Fitzroyella*. Special attention is paid to the external morphology of *F. alata* n.sp. A new term "marginal pseudospines", a feature characteristic of uncinuloids, is proposed.
