

## **Growth allometry in a bivalve *Anadara diluvii* (Lamarck) from the Badenian (Miocene) Korytnica Clays, Poland**

Antoni Hoffman

*Acta Palaeontologica Polonica* 23 (1), 1978: 41-49

In *Anadara diluvii* from the Badenian (Miocene) Korytnica Clays, Poland, an allometry occurs in the growth of both the ligament and adductor muscles. In case of the ligament growth, the allometry was necessitated by duplivincular nature of the ligament itself and the endobysate semi-infaunal mode of life. The low rate of juvenile adductor growth was extorted by some functional need§ removed in the adults.
