ACTA PALAEONTOLOGICA POLONICA

A blind phacopid trilobite from the Famennian of the Holy Cross Mountains

Błażej Berkowski
Acta Palaeontologica Polonica 36 (3), 1991: 255-264

Trimerocephalus interruptus sp. n. from marly limestones of Famennian age in the Holy Cross Mountains is characterized by a cephalon typical for late species of *Trimerocephalus* and a pygidiurn typical for *Dianops*. The preservation of articulated trilobites in Salterian positions in slowly deposited mark of Kowala suggests their infaunal mode of life.

Key words: trilobites, Phacopida, Devonian, Poland, taphonomy.
