

***Heckerella*, a new genus of the early Frasnian (Late Devonian) atrypid brachiopod**

Maria A. Rzonsnitskaya and Elena V. Sokiran
Acta Palaeontologica Polonica 45 (4), 2000: 425-430

A new atrypid genus *Heckerella* from early Frasnian (*Palmatolepis transitans* Zone) of northwestern East European Platform is proposed. It includes only *Heckerella heckeri*, originally referred to *Anatrypa*. The new genus is characterised by weakly paraplicate anterior commissure, well-developed carina on the ventral valve, sulcus on the dorsal valve and coarser radial ornament. *Heckerella* has restricted geographic distribution in northwestern Russia, Latvia, northeastern Lithuania where it forms high-density associations with *Pseudoatrypa velikaya*.

Key words: Atrypida, Brachiopoda, Late Devonian, East European Platform.
