

A new occurrence of Late Cretaceous eutherian mammal *Zalambdalestes*

Zofia Kielan-Jaworowska and Borys A. Trofimov

Acta Palaeontologica Polonica 26 (1), 1981: 3-7

Nearly complete left lower jaw of *Zalambdalestes lechei* is described, from Toogreeg beds, locality of Toogreeg on the Gobi Desert. An occurrence of *Z. lechei*, (known so far only from the Djadokhta Fm.) in Toogreeg beds, gives support to an opinion that Toogreeg beds are a stratigraphic equivalent of the Djadokhta Fm., which is of ?late Santonian and/or ?early Campanian age.

Key words: Mesozoic mammals, *Zalambdalestes*, Late Cretaceous, Gobi Desert.
